

Kayleigh's Personal Notes and Docs she found important in researching how to set up a Firebase database with the UniRoom app.

Firestore Research Docs

- <https://firebase.google.com/docs/ios/setup>
- <https://firebase.google.com/docs/web/setup>
- <https://docs.expo.dev/versions/latest/sdk/application/>
- <https://firebase.google.com/docs/database/usage/limits>
- <https://firebase.google.com/docs/database/rtdb-vs-firestore>

Notes: It is likely not possible to set up Firestore with Expo with iOS app base. iOS apps designed in iOS include a bundle-id. The bundle-id is not a part of React Native projects. An alternative is likely using the web app option in setting up the data base with Expo. This option should be experimented with in a separate branch. If it is not possible a different database option may need to be picked, or Expo may not be a viable option anymore. Further discussions need to be conducted with team members to decide on course of action.
